Department of Public Health and Infectious Diseases, Sapienza University of Rome, 00161 Rome, Italy

Deadline for manuscript submissions:

**closed (15 January 2024)**

### **Message from the Guest Editor**

As Section Editor-in-Chief of *Epidemiology*, I am pleased to announce the Special Issue "Feature Papers of Epidemiology and Vaccines 2023". This issue aims to enhance the impact of the interactions and effects of vaccines (and vaccination programs) on the occurrence of vaccine-preventable diseases.

In this Special Issue, we will collect articles from top researchers describing new approaches or new cutting-edge developments in the fields of infectivity, vaccine efficacy and effectiveness, vaccine failure, herd immunity, herd effect, epidemiological transfer, and disease modeling of various epidemics. Moreover, this issue will also consider the viewpoints of major stakeholders, including decision makers, immunization program managers, public health experts, pediatricians, family doctors, and other experts/individuals involved in the provision of immunization services and those who conduct research on awareness and behaviors surrounding vaccine epidemiology, as well as in other relevant scientific fields. We welcome the submission of manuscripts from Editorial Board Members and from outstanding scholars invited by the Editorial Board and the Editorial Office.

## Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

**Journal Rank:** JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Infectious Diseases)
