closed (20 January 2024)

Message from the Guest Editor

This Special Issue is a continuation of our previous Special Issue, entitled "Vaccination Strategies for COVID-19" (https://www.mdpi.com/journal/vaccines/special_issues/COVID-19_vaccine).

We are at the precipice of unprecedented developments in the arena of vaccine development and application. In the wake of COVID-19, government, academia, medicine, science, and engineering have coordinated, matured, and promoted worldwide vaccination strategies as part of the healthcare armamentarium towards curtailing and hopefully eradicating this global pandemic. These include both "tried and true" as well as novel modalities to stimulate the immune system to provide appropriate and hopefully long-lasting protection against the COVID-19 wild-type virus as well as potential variants. In this Special Issue, we entreat those invested in the unique field of vaccine development, application, and the greater healthcare industry to share their understanding with their clinical, scientific, academic, medical, and healthcare colleagues. This will provide a platform to amalgamate efforts and understanding as well as synergize efforts for current and future vaccine initiatives.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Infectious Diseases)
