Message from the Guest Editors

Dear Colleagues,

Vaccination is the most effective method of controlling seasonal influenza infections and preventing possible pandemic events. To date, three different classes of influenza vaccines have been licensed: inactivated, live attenuated and recombinant haemagglutinin vaccines. Most of the current influenza vaccines are still produced and/or isolated in hen's eggs; however, several novel platforms and technologies are being developed for the production of the next-generation vaccines.

This special issue focuses on recent progress on seasonal and pandemic influenza vaccines. The goal is to provide an overview of different types of influenza vaccine, new technologies and platforms under development for the next-generation vaccines.

This special issue invites contribution to these topics.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
