Deadline for manuscript submissions:

closed (31 July 2024)

Message from the Guest Editor

Since the start of the COVID-19 pandemic, research on immune responses against infectious diseases has attracted significant interest. Additionally, it is now widely accepted that a successful vaccine against infections need not only offer protective humoral immune responses mediated by B cells but also effective cellular immune responses mediated by T cells.

Therefore, we are launching this Special Issue on “Cellular Immune Responses to Infectious Diseases” in *Vaccines* to publish recent findings on cellular immune responses against pathogens, such as viruses, bacteria, fungi, and parasites. Implications on vaccine development are highly welcome but not necessary. Acceptable formats include research articles, review articles, and case reports. The research areas of submitted manuscripts may include but are not limited to the following: development of new vaccines against infectious diseases, general T cell responses against pathogens, T cell responses after vaccination, T cell responses in mucosa, interaction between T cells and other immune cells in infections, development of immunological assays related to vaccine development.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q2 (Medicine, Research and Experimental) / CiteScore - Q1 (Pharmacology (medical))
