Message from the Guest Editor

Dear Colleagues,

Plants are emerging as powerful platforms for the production of biopharmaceuticals and industrial proteins. Plant-based vaccines, monoclonal antibodies and other therapeutic proteins show promise as inexpensive yet efficacious approaches to address global health. Vaccines made from plants are safe, easy to generate en masse and can be stored at ambient temperatures. These distinct properties make plant-based vaccines attractive alternatives for providing medicines which have previously been inaccessible and unaffordable to the poor in developing countries. In addition to this, plant-based vaccines can be stockpiled to guard against global pandemics such as Influenza and could be employed in personalized medicine, such as addressing chronic diseases including cancer. Plant-based vaccines can therefore facilitate improvements in global health through multiple conduits.

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.**

Journal Rank: JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))
