Varicella and Zoster Vaccination

Message from the Guest Editor

In temperate climates such as the UK, many children have experienced varicella by the age of 10 years and by adulthood in excess of 90% of the population has evidence of prior VZV infection. In tropical zones, VZV infection tends to occur in individuals of older age groups. Effective vaccines are available to prevent varicella; however, uptake has been variable following concerns that varicella vaccination may result in increased cases of zoster later in life. Recently, zoster vaccines have also become available. In this Special Issue, varicella and zoster epidemiology will be addressed together with the benefits of vaccination, both in relation to differing geographical regions and in the face of new infectious challenges (SARS-CoV-2) and associations with neurological diseases.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
