

## Special Issue

# Vaccines and Prevention of Infections in Early Life

### Message from the Guest Editor

The focus on the well-being of our population begins in the neonatal period and early infancy. Early-life infections have high mortality and morbidity and may have a tremendous negative impact on our health rates. Significant progress has been made towards the prevention of infections in early life. However, there are still many challenges to overcome. Infections from pathogens continue to pose a significant burden for neonates and young infants. Extensive research focuses on the development of novel maternal vaccines and ways to boost maternal immunity and placental antibody transfer to protect the offspring. Apart from maternal vaccines, there are also other preventive measures under investigation that may be employed. There are still unanswered questions on the acceptance and implementation of the existing maternal vaccines, as well as their impact on the infant's immunity and immune responses to other vaccines. Further research on the epidemiology of early-life infections, screening strategies and preventive measures that will advance our understanding and reduce the instances of disease in this population is of great importance.

## About the Journal

### Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /  
CiteScore - Q1 (Pharmacology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
