

Special Issue

Infectious Disease Epidemiology and Public Health

Message from the Guest Editors

This Special Issue focuses on infectious disease epidemiology and public health. Although according to the epidemiological transition, the major causes of death and morbidity today are NCDs, infectious diseases, specially re-emerging ones, are important for public health. Thus, we are pleased to invite different types of papers in this Special Issue to fill the gaps and strengthen our knowledge regarding public health, which can improve approaches to the prevention and control of infectious diseases. This Special Issue aims to:

- Describe the status of infectious diseases with the highest burden in the world;
- Evidence the best approaches for prevention and control of those infectious diseases with the highest burden with an efficient, scientifically sound approach;
- Introduce the best methods for early diagnosis and screening of common infectious diseases with the highest burden in the world;
- Summarizing evidence according to the effectiveness and efficiency of different approaches, specifically according to the public health point of view, to control infectious diseases, with a systematic review approach.

We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
