Immunology and Vaccines Development on HIV, Measles, Chikungunya Virus and SARS-CoV-2

Message from the Guest Editors

As commonly reported, HIV, measles, chikungunya virus, and SARS-CoV2 are global health issues. Recurrent productive infections are responsible for high morbidity and mortality. The induction of antigen/viral-specific immune responses plays an evident role in the development of a durable and effective vaccine. However, there is still an incomplete understanding of the immune response of pathways elicited by viral infections, fill gaps by the rational design of prophylactic and/or therapeutic vaccines, and the choice of the proper adjuvant to elicit protective response. To achieve a more extensive understanding of recent scientific knowledge and current trends in viral vaccine development, this Special Issue focuses on the recent scientific and progresses made in this field. Based on your extensive knowledge and experience, we invite you to contribute an original report, original observation, or review to highlight (i) antibody protection, (ii) immune responses after primary/secondary infection, and (iii) recent advances in the development of novel prophylactic and therapeutic vaccines. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Department of Infectious Diseases, College of Veterinary Medicine,
University of Georgia, Athens, GA 30602-7387, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
