

# Special Issue

## Personalised Cancer Vaccines

### Message from the Guest Editor

Personalized mRNA cancer vaccines are a form of immunotherapy treatment that is currently being tested in clinical trials. They are tailored to each person's cancer and work by training the immune system to recognize, destroy, and prevent the spread of cancer cells. In recent years, there has been a renewed interest in personalized cancer vaccines, primarily due to the use of innovative technologies to identify neoantigens and novel vaccine delivery platforms. In this Special Issue, novel cancer vaccines, adjuvants, and therapeutics will be examined, with regard to their regulation and treatment of disease. Cancer vaccines are coming.

## About the Journal

### Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /  
CiteScore - Q1 (Infectious Diseases)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
