

Special Issue

Epidemiology, Vaccination and Public Health

Message from the Guest Editors

The coronavirus disease-2019 (COVID-19) pandemic substantially affected health services worldwide. Recent analyses show that most countries have experienced at least some disruptions to essential health services, with routine immunisation services among the most frequently interrupted. With global gains in vaccine coverages stalling or declining in recent years, any additional delay in routine vaccination administrations is a threat to population health, especially for children. Within this context, effective catch-up strategies for recovery and expansion of routine immunisation services and increasing vaccine acceptance are in constant need of research. We are pleased to invite you to submit an article to this Special Issue on *Epidemiology, Vaccination and Public Health*. Research areas may include (but are not limited to) the following: (1) catch-up vaccination strategies and immunization rates; (2) vaccination of population subgroups including pregnant women, children, adolescents and healthcare workers; (3) interventions to promote vaccine acceptance. Original research articles and reviews are welcome. We look forward to receiving your contributions.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
