

Special Issue

Influenza Virus Vaccines and Vaccination

Message from the Guest Editor

We are pleased to announce a Special Issue dedicated to the theme "Influenza Virus Vaccines and Vaccination". We invite researchers and experts from diverse backgrounds to submit high-quality research papers and reviews that explore the immunopathogenic mechanisms and strategies for controlling influenza viruses. We encourage scientists to share their experimental findings and theoretical insights in the form of open-access publications. To ensure the reproducibility of research, we request contributors to provide comprehensive details of their experiments. Additionally, authors are encouraged to include computational data or supplementary materials in their submissions, along with providing complete procedural information. The primary objective of this Special Issue is to enhance our comprehension of the intricate immunopathogenic mechanisms associated with influenza viruses, while also fostering the development of innovative approaches for the effective management of influenza virus infections. We look forward to receiving your valuable contributions to this timely and significant Special Issue.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Editor-in-Chief

Prof. Dr. Ger Rijkers

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2026).
