The Current Situation and Future Perspective of Vaccines against Infectious Diseases in Children and Women

Message from the Guest Editors

Vaccination is crucial in reducing the prevalence of infectious diseases. Vaccinating children on time throughout their childhood is vital because it helps to provide immunity before they contract diseases. Moreover, all women should ensure that they are up-to-date with their vaccinations before becoming pregnant. It is important to keep women of a reproductive age up-to-date with immunizations, whether or not they are actively trying to conceive. Some vaccinations are strongly recommended, even for pregnant women. Several issues remain regarding vaccination against infectious diseases in children and women. Thus, we encourage the submission of articles and reviews on advances regarding the vaccination in children and women and articles on vaccination-related issues in these groups. Adding new information on these subjects may lead to a better understanding of vaccine-related disease prevention and the development of new vaccines against infectious diseases in children and women.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Roosevelt, 4331 CB Middelburg, The Netherlands

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.1 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the second half of 2025).
