SARS-CoV-2 Infection in Women and Children

Message from the Guest Editor

The SARS-CoV-2 vaccine has been recommended for pregnant women, but survey studies show wildly different results around the world in terms of the willingness to be vaccinated during pregnancy. The cumulative uptake of the SARS-CoV-2 vaccine among pregnant women appears to remain low. A lack of information on the impact of vaccination during pregnancy on fetal safety is one of the most important factors preventing pregnant women from being immunized, thereby preventing herd immunity from being achieved. Vaccinating as many people as possible is crucial if we are to rebuild a normal way of life. Vaccination campaigns are urgently needed to increase confidence in vaccines to help reduce the spread of infection and possible consequences during pregnancy. This Special Issue focuses on the immune response of vaccinated pregnant women, the safety and efficacy of COVID-19 vaccination during pregnancy, and the vaccine's impact on maternal and fetal immune responses. We welcome all types of submissions, including original research, reviews, case reports, etc., for this Special Issue. We look forward to receiving your contributions!

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

University of Georgia, Athens, GA 30602-7387, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
