

## Special Issue

# Reverse Vaccinology and Vaccine Antigens

### Message from the Guest Editor

The aim of this specific issue is to publish papers describing the development or optimization of human or veterinary vaccines identified through reverse vaccinology or other strategies partly based on bioinformatics (for example after antibody repertoire analysis). This issue will also contains papers describing the development of novel bioinformatics strategies enabling the research of vaccine antigens or papers showing novel methods enabling the expression of antigens identified by bioinformatics strategies. This will include B and/or T-cell antigens.

## About the Journal

### Message from the Editor-in-Chief

*Vaccines* (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

#### Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /  
CiteScore - Q1 (Pharmacology (medical))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
