

Special Issue

Tick-Vaccine and Tick-Control

Message from the Guest Editors

It would be interesting to include a special topic “vector borne diseases control”. In this issue would be include all the latest approaches that are being used to vector and vector borne diseases control. This issue could include mosquitoes, ticks, malaria, Lyme diseases, anaplasmosis, Crime-Congo virus, and it would include those scientific investigations that do not fit completely in other special issues. Keywords:

- ticks
- mosquito
- vaccine
- control pathogen
- vector-borne pathogens control
- vector-borne diseases

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPLus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2026).
