Vaccine-Induced Reprogramming of Innate Immune Response

Message from the Guest Editor

The innate immune system is the first line of host defense against pathogens. However, over-activation of the innate immune response can cause systemic inflammation and tissue damage. Both RNA-based or Non-RNA vaccines influence the innate immune response through promoting the development of adaptive immunity or reprogramming of the innate immunity known as “Trained immunity” which imparts non-specific protection to the host against the pathogen. It is still unclear how host innate immunity responds to pathogens post-vaccination and what is the broad impact of vaccination on the innate immune response? Therefore, this special issue seeks original contributions both in the form of research and reviews articles that advance our understanding of the vaccine-induced innate immune response.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Department of Infectious Diseases, College of Veterinary Medicine,
University of Georgia, Athens, GA 30602-7387, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
