Research and Development on Therapeutic Agents and Vaccines for COVID-19

Message from the Guest Editors

The impact of the COVID-19 pandemic on humankind is persistent, despite the availability of a number of vaccines and some approved therapeutic agents. The continuous evolution of SARS-CoV-2 demands a broadly neutralizing therapy against current and emergent variants that may be helpful for both prevention and treatment. SARS-CoV-2 may not be the last human coronavirus to emerge from animals. To understand the virus replication and mutation mechanism, close monitoring of their populations in the early stages and the investigation of new druggable targets are promising strategies. We invite contributions from the international community of researchers for this Special Issue on the ongoing progress in COVID-19 research. The goal of this Special Issue is to communicate the recent advances in the domain to the scientific community which may help to focus on the new strategies for containing the COVID-19 virus. Research areas may include (but are not limited to) the discovery of vaccines or drugs/drug targets and the ongoing research and development of vaccines and therapeutic strategies to fight against SARS-CoV-2.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Department of Infectious Diseases, College of Veterinary Medicine,
University of Georgia, Athens, GA 30602-7387, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
