Aquaculture Diseases: Prevention and Control Strategies

Message from the Guest Editor

Aquaculture is one of the important food resources of human beings; however, some aquaculture pathogens can cause serious problems on fish farms or break the wild nature system, may decimate fish stocks, or make a farmer's products unmarketable. To ensure human food security and protect the ecological environment, we need to take action to prevent and manage aquaculture diseases, mitigate natural hazards, and reduce economic losses. In this Special Issue, we would like to collect papers that highlight further research needs and provide recommendations for management and policy. We also welcome new research on prevention and management methods including vaccines and vaccination development for aquaculture.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q1 (Immunology) / CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 3.3 days (median values for papers published in this journal in the second half of 2024).
