Assessment of Post-COVID-19 Complications and Vaccination Efficacy

Message from the Guest Editors

There is a need to study vaccine efficacy and its ability to protect against SARS-CoV-2 infection, including reducing the virus spread, inducing sustainable immunity, and reducing hospitalization and progression to COVID-19 complications in subjects across different age groups and in those having comorbidities. In this Special Issue, we call for articles that address post-COVID-19 vaccination efficacy and complications. Original articles, short communications, review articles, and commentaries are also welcome.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp
