Research on Immune Response and Vaccines

Message from the Guest Editor

The importance of vaccination has gained much attention, due to the advent of COVID-19 pandemic. The ultimate goal of vaccination is to generate a safe and effective long-term immune response against targeted disease. Most vaccines work by mimicking infections. Vaccines activate the immune system and generate memory T and B lymphocytes that "remember" the disease-causing agents. Upon encountering these pathogens later, the immune system will mount a rapid and robust immune response to antigens it has previously experienced, thereby preventing disease or reducing its severity. The initial response to a vaccine is similar to the primary response upon first exposure to a pathogen, that is, slow and limited. In this Special Issue, we will collect articles research related to vaccine efficacy and effectiveness, vaccine failure, herd immunity, herd effect, epidemiological transfer. Specifically, vaccine-related immune responses. We invite research employing quantitative and qualitative methods as well as contributions featuring under-researched populations.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

University of Georgia, Athens, GA 30602-7387, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
