Neurological Adverse Events Associated with Vaccination

Message from the Guest Editors

Neurological complications are among the most feared side effects, and the occurrence of multiple sclerosis or autism as a result of vaccinations are commonly cited by vaccination opponents. More recent developments such as RNA vaccinations are also causing fear among the lay public and are often used by opponents of vaccination to deter people from using vaccines. We invite colleagues from all disciplines to systematically exchange knowledge about neurological complications after vaccination. The latest developments in this area will be presented, and a comprehensive picture of the benefits and possible complications after vaccination will be given. Prof.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
