

Special Issue

Research in Human Sepsis and Its Immunology

Message from the Guest Editor

We would like encourage the presentation to this Special Issue of recent advances in the understanding of the cellular and signaling mechanisms that underpin the profound immune-suppressive state that exists in human sepsis. Articles providing novel insight into signaling pathways governing the interaction of inflammation and immunity in human sepsis are sought. We welcome articles on the clinical relevance of immune suppression in human sepsis and relevant biomarkers of immunity and inflammation that may potentially be of use in this clinical arena. Articles relating to novel immune-modulating therapies for humans with sepsis are sought after.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPLus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2026).
