Immunobiology and Vaccination Strategies in Emerging Infectious Diseases

Message from the Guest Editors

Infectious diseases are disorders caused by organisms such as bacteria, viruses, fungi or parasites. Vaccination is an important approach that can prevent infectious diseases. Thanks to general vaccination programs worldwide, the prevalence of many infectious diseases has remarkably decreased. However, for some diseases, studies are ongoing to find effective vaccines combating especially emerging infectious diseases. The Scope of this Special Issue includes but is not limited to:

- Vaccination;
- Immunization;
- New adjuvants;
- Nano-adjuvants;
- DNA vaccine;
- Cocktail vaccine;
- In silico vaccine design;
- Vaccine hesitancy and safety;
- Public health rapid response vaccines to pandemics;
- New regulatory pathways for urgent vaccines;
- Vaccine platforms and delivery systems.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X), founded in 2013, now has a firm history of publishing peer-reviewed, state-of-the-art research papers on vaccines and vaccination in the broadest sense. Areas covered include, but are not limited to, novel and emerging vaccine technologies, building on in-depth knowledge of what constitutes a protective immune response. These can be new vaccines for old diseases, or old vaccines for new diseases. Vaccines against cancer and autoimmune diseases explicitly are also within the scope of the journal. Because public opinion and even government policies towards vaccines and vaccination have changed, vaccine policy and public health issues are major concerns. Climate change will also have an impact on the spread of infectious diseases, and thus also on vaccine and vaccination policies worldwide.

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPlus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.5 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2026).
