The Willingness toward Vaccination: A Focus on Non-mandatory Vaccinations

Message from the Guest Editors

The decision to receive non-mandatory vaccinations is left to the choice of the individual. Even if they are offered free of charge, these vaccinations can be overlooked by the general population, whose judgment is heavily influenced not only by individual characteristics, but also by numerous reasonable and unreasonable external factors. When governments do not coerce citizens to get vaccinated, the full effect of vaccine hesitancy can be observed, eventually bringing the level of herd immunity to zero. To further explore the topic of willingness to get vaccinated, as well as vaccine hesitancy, in this Special Issue, we would like to encourage the submission of articles that explore how external and internal factors can influence the decision-making process of every individual in one way or another. Whether the COVID-19 pandemic has had an effect on willingness toward other vaccinations, especially non-mandatory ones such as influenza and HPV vaccines, is still debated, and therefore, papers that compare the actual vaccination rate or intentions with historic, pre-COVID-19 data for a particular non-mandatory vaccine are welcomed.

About the Journal

Message from the Editor-in-Chief

Vaccines (ISSN 2076-393X) has had a 6-year history of publishing peer-reviewed state of the art research that advances the knowledge of immunology in human disease protection. Immunotherapeutics, prophylactic vaccines, immunomodulators, adjuvants and the global differences in regulatory affairs are some of the highlights of the research published that have shaped global health. Our open access policy allows all researchers and interested parties to immediately scrutinize the rigorous evidence our publications have to offer. We are proud to present the work and perspectives of many to contribute to future decisions concerning human health.

Editor-in-Chief

Prof. Dr. Ralph A. Tripp

Department of Infectious Diseases, College of Veterinary Medicine,
University of Georgia, Athens, GA 30602-7387, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, CAPIus / SciFinder, and other databases.

Journal Rank:

JCR - Q2 (Medicine, Research and Experimental) /
CiteScore - Q1 (Pharmacology (medical))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 19.6 days after submission; acceptance to publication is undertaken in 2.8 days (median values for papers published in this journal in the first half of 2025).
