

## Special Issue

# Antimicrobial Resistant Sexually Transmitted Infections: Epidemiology, Detection, and Management

### Message from the Guest Editors

Antimicrobial resistance (AMR) has become one of the most critical public health problems of our time, and we have begun to enter the post-antibiotic era. AMR in sexually transmitted infections is an increasing concern, and there is a clear need to understand the scope of this problem, and to determine the most appropriate methods of management and techniques of detection. In this Special Issue, we are therefore seeking to receive submissions regarding AMR in sexually transmitted infections, as well as innovative ways to address this problem.
