Ruminant Mastitis: Therapies and Control

Message from the Guest Editor

Mastitis is an important disease in dairy farming, which causes lots of economic losses every year. Although research and efforts have been made, mastitis is still the first issue that should be considered in the development of the industry, which is related to food safety and human health. Many causes have been involved in mastitis, e.g., bacteria, viruses, machine disorders, heat stress, nutritional factors, etc. Therefore, this Special Issue on “Ruminant Mastitis: Therapies and Control” aims to promote research on the mechanism of mastitis and others about the prevention, treatment, and control development in practical farms or experimental animal models.

About the Journal

Message from the Editor-in-Chief

Veterinary Sciences (ISSN 2306-7381) is an international and interdisciplinary scholarly open access journal that aims at publishing research in all fields of veterinary medicine in a democratic way. We encourage scientists to publish their original research articles, reviews, communications, and short notes in as much detail as possible. Articles submitted that involve subjecting animals to unnecessary pain or suffering will not be accepted, and all articles must be submitted with the necessary ethical approval (please refer to the Ethical Guidelines for more information).

Editor-in-Chief

Prof. Dr. Patrick Butaye

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.8 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
