Minimizing Anesthetic Risks in Dogs and Cats

Message from the Guest Editor

During anesthetic procedures, there is a constant risk associated with anesthetic protocols and its physiologic effects, namely in cardiovascular and brain functions. An understanding of perioperative monitoring and drug delivery systems, as well as the pharmacokinetic/pharmacodynamic characteristics of anesthetic drugs, largely contributes to increasing anesthetic safety and animal wellbeing, not only during the anesthetic procedures, but also in short- and long-term post-operative periods. Moreover, pain is an unavoidable variable when discussing animal comfort and anesthetic safety. We invite you to submit scientific reports, sharing your practical experiences and clinical works, contributing to increasing anesthetic safety and animal comfort.

About the Journal

Message from the Editor-in-Chief

Veterinary Sciences (ISSN 2306-7381) is an international and interdisciplinary scholarly open access journal that aims at publishing research in all fields of veterinary medicine in a democratic way. We encourage scientists to publish their original research articles, reviews, communications, and short notes in as much detail as possible. Articles submitted that involve subjecting animals to unnecessary pain or suffering will not be accepted, and all articles must be submitted with the necessary ethical approval (please refer to the Ethical Guidelines for more information).

Editor-in-Chief

Prof. Dr. Patrick Butaye

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.8 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2025).
