Drug Resistance in Ruminants: Rational Use of Anthelmintics and Alternative Strategies

Message from the Guest Editors

Gastrointestinal nematodes (GINs) are of paramount importance in ruminant production systems, as they affect animal health and welfare, and cause significant economic losses to the livestock industry. The management and control of GIN infections is a challenging task, and is currently almost entirely dependent on efficient anthelmintic drugs. However, the improper use (over- and mis-use) of anthelmintics has led to the development of anthelmintic resistance. There have been reports of GIN populations resistant to multiple classes of anthelmintics worldwide, representing a clear threat to existing GIN control programs. Therefore, the emergence of anthelmintic resistance in livestock increasingly requires the rational use of anthelmintics and alternative remedies for helminth control. The aim of this Special Issue is to present the latest research and reviews on anthelmintic resistance and GINs fauna, on the rational use of anthelmintics, and on alternative approaches to the control of GINs in livestock.

About the Journal

Message from the Editor-in-Chief

Veterinary Sciences (ISSN 2306-7381) is an international and interdisciplinary scholarly open access journal that aims at publishing research in all fields of veterinary medicine in a democratic way. We encourage scientists to publish their original research articles, reviews, communications, and short notes in as much detail as possible. Articles submitted that involve subjecting animals to unnecessary pain or suffering will not be accepted, and all articles must be submitted with the necessary ethical approval (please refer to the Ethical Guidelines for more information).

Editor-in-Chief

Prof. Dr. Patrick Butaye

1. Department of Pathobiology, Pharmacology and Zoological Medicine, Faculty of Veterinary Medicine, Ghent University, Salisburylaan 133, B9820 Merelbeke, Belgium

2. Department of Infectious Diseases and Public Health, Jockey Club College of Veterinary Medicine and Life Sciences, City University of Hong Kong, 31 To Yuen Street, Kowloon, Hong Kong SAR 999077, China

Author Benefits

High visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, PMC, Embase, PubAg, AGRIS, and other databases.

Journal Rank:

JCR - Q1 (Veterinary Sciences) / CiteScore - Q1 (General Veterinary)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.1 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the first half of 2025).
