

## Special Issue

# The Characterisation and Simulation of Environmental Shock and Vibration

### Message from the Guest Editor

Shocks and vibrations are pervasive in many environments where engineering endeavours take place. These shocks and vibrations often have a detrimental effect on the structures and vehicles involved, as well as their cargo, both human and inert. [...]

As the vast majority of environmental shocks and vibrations are random and highly (statistically) non-stationary, simply replicating the shocks and vibrations recorded from a single event (however long) will not be sufficiently representative of all possible types of shocks and vibrations that can occur. Producing a suitably representative function (or set of functions) that adequately takes into account randomly-occurring shocks as well as vibration non-stationarities from a finite number of sample records is not easily achieved. This Special Issue addresses the latest approaches and techniques specially developed or adapted for the characterisation and simulation environmental shocks and vibrations.

## About the Journal

### Message from the Editor-in-Chief

---

#### Editor-in-Chief

Prof. Dr. Aleksandar Pavic

College of Engineering, Mathematics and Physical Sciences, University  
of Exeter, Kay Building, Exeter EX4 4QF, UK

---

#### Author Benefits

##### High Visibility:

indexed within Scopus, ESCI (Web of Science), and other  
databases.

##### Journal Rank:

CiteScore - Q2 (Engineering (miscellaneous))

##### Rapid Publication:

manuscripts are peer-reviewed and a first decision is  
provided to authors approximately 22.7 days after  
submission; acceptance to publication is undertaken in 2.9  
days (median values for papers published in this journal in  
the first half of 2025).
