

Special Issue

Recent Advances in Vibration-Based Structural Health Monitoring

Message from the Guest Editor

This Special Issue will present recent advances made in vibration-based structural health monitoring (VBSHM) using dynamic responses of the structure to an excitation. In fact, vibration-based approaches are suitable for global health monitoring of structures even without any a priori knowledge of and accessibility to the damage location. Papers on parameter and feature estimation based on linear structural behavior, SHM taking into account the nonlinear structural behavior, sensor layout and data collection strategies, integration of SHM with vibration control of structures, wireless monitoring, and applications or case studies are expected.

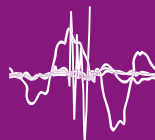

Guest Editor

Dr. Roger Serra

About the Journal

Message from the Editor-in-Chief

Editor-in-Chief

Prof. Dr. Aleksandar Pavic

College of Engineering, Mathematics and Physical Sciences, University
of Exeter, Kay Building, Exeter EX4 4QF, UK

Author Benefits

High Visibility:

indexed within Scopus, ESCI (Web of Science), and other
databases.

Journal Rank:

CiteScore - Q2 (Engineering (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is
provided to authors approximately 22.7 days after
submission; acceptance to publication is undertaken in 2.9
days (median values for papers published in this journal in
the first half of 2025).
