

Special Issue

Digital Twins in Cultural Heritage

Message from the Guest Editor

The present Special Issue aims at analysing how this innovative approach can be applied in the area of cultural heritage. Applications of digital twins on cultural heritage have so far concerned how data can be organized; what kind of services may exploit such data organization to support activities in this domain, such as the study, the communication, the exploitation, and the preservation of cultural heritage. Finally, research has addressed simulation issues based on digital twins, both to analyse possible behaviours and to set up automatic responses based on a bidirectional communication between the simulated world and the real one.
