**closed (25 November 2022)**

### Message from the Guest Editors

Dear Colleagues,

Hepatitis E virus (HEV) is one of the most important causes of viral hepatitis globally. HEV is actually an umbrella term for a large group of variants, many of which can cause human infections. Through multiple transmission routes (food-borne zoonotic, human-to-human, blood-borne), HEV has established niches in various epidemiological settings. The clinical spectrum of hepatitis E ranges from asymptomatic infection to fulminant hepatitis. Extrahepatic manifestations are increasingly recognized and immunocompromised patients are prone to persistent infections.

This Special Issue ‘Hepatitis E Virus (HEV)’ seeks to publish high-quality original research and review articles on unanswered questions in the field of hepatitis E pathogenesis, epidemiology, clinical management, and control. Both clinical research and basic research with translational relevance are welcome.

Dr. Siddharth Sridhar

## Message from the Editor-in-Chief

*Viruses* (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

## Author Benefits

**Open Access:** free for readers, with **article processing charges (APC)** paid by authors or their institutions.

**High Visibility:** indexed within **Scopus**, **SCIE (Web of Science)**, **PubMed**, **MEDLINE**, **PMC**, **Embase**, **PubAg**, **AGRIS**, and **other databases**.

**Journal Rank:** JCR - Q2 (*Virology*) / CiteScore - Q1 (*Infectious Diseases*)
