Message from the Guest Editor

Dear Colleagues,

The challenge of HIV neurological disorders spans numerous neuroscience disciplines. Neurology, neuropathology, neurovirology, immunology, pharmacology, psychiatry, and psychology all contribute to improving the longevity and quality of life. However, because many antivirals cannot enter the brain due to the blood-brain barrier, HIV-associated neurological and cognitive symptoms can still persist. This creates two problems: it establishes the brain as a reservoir of viral infection and also makes the brain susceptible to the effects of HIV infection.

This Special Issue seeks articles and reviews that focus on the neuroscience of HIV/AIDS infections. In addition, the Society for Neurosciences will be meeting in San Diego, 12–16 November 2022. There is often a section on HIV-related neuroscience abstracts. If you present on an HIV-neurological disorder, perhaps you can consider submitting a full-length paper to this Special Edition. We will also consider including a relevant overview of the presented neuroscience HIV-related abstracts.

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
