Viroid-2018: International Conference on Viroids and Viroid-Like RNAs

Message from the Guest Editor

Viroids are a very intriguing type of infectious agent of higher plants, since they are exclusively constituted by a relatively small molecule (246–401 nt) of circular RNA. From their discovery in the late 1960s and early 1970s, a great deal is known about viroid biology and biochemistry, and the pathology of viroid diseases. However, more needs to be discovered about aspects, such as viroid replication, traffic and interaction with the host plant; structure of viroid molecules and functional domains; viroid transmission, pathogenesis and disease control; viroid diagnosis and identification of new viroid species. All these topics and more are to be discussed at Viroid-2018, an international conference on viroids and viroid-like RNAs that will be held in Valencia (Spain) 5–7 July, 2018. I invite all researchers in the viroid community, and particularly the participants of Viroid-2018, to present their recent discoveries about all aspects of viroid and viroid-like RNA biology in this Special Issue.

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section. Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High visibility: indexed by the Science Citation Index Expanded (Web of Science), MEDLINE (PubMed) and other databases. Full-text available in PubMed Central.

Rapid publication: manuscripts are peer-reviewed and a first decision provided to authors approximately 15.4 days after submission; acceptance to publication is undertaken in 4.1 days (median values for papers published in this journal in the second half of 2018).
