Message from the Guest Editors

Dear Colleagues,

Nonprimate lentiviruses, notably lentiviruses of felids, equids, and ruminants, are important worldwide pathogens that cause chronic lifelong disease in a species-specific manner. Viral pathogenesis, epidemiology, viral ecology and evolution, host restriction and immunological perturbations caused by these agents have important implications in naturally occurring infections in native hosts. Studies of the comparative pathogenesis and prophylactic or interventional therapies for these agents can significantly advance our understanding of HIV–AIDS. This Special Issue of *Viruses* will provide reviews, contemporary research reports, and commentaries about these fascinating and often overlooked agents.

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Author Benefits

Open Access: free for readers, with **article processing charges (APC)** paid by authors or their institutions.

High Visibility: indexed within **Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, AGRIS, and other databases.**

Journal Rank: JCR - Q2 (*Virology*) / CiteScore - Q1 (Infectious Diseases)
