Enteric Viruses in Environment and Humans: Identification, Surveillance and Control

Message from the Guest Editors

Environmental and human monitoring for enteric viruses, including polioviruses, non-polio enteroviruses, and gastroenteritis viruses, such as rotavirus and norovirus, is integral to the One Health approach. This perspective highlights the interconnectedness of human, animal, and environmental health, emphasizing the impact of environmental viral pathogens through contaminated water, food, or surfaces. The surveillance of environmental reservoirs, such as wastewater, enables the early detection of public health threats, guides vaccination strategies, and mitigates zoonotic transmission risks. Strengthening these systems supports a comprehensive response to global health challenges and aligns human and environmental health efforts. We invite submissions on innovative detection methods, the impact of vaccination programs on environmental virus circulation, and outbreak investigations in humans and animals. Research on the integration of environmental surveillance into public health systems and its role in preventing and managing viral outbreaks is particularly encouraged.

About the Journal

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
