

## Special Issue

# Antigenic Drift in Respiratory Viruses

### Message from the Guest Editor

Understanding the evolutionary patterns that increase the diversity of viral respiratory pathogens has become paramount. The world faces increasing risks of major infectious outbreaks posed by pathogens such as influenza virus, adenovirus, respiratory syncytial virus and even other members of the *Coronaviridae* family. In this context, technological and analytical approaches have made it possible to simulate *in silico*, and experimentally characterize in detail, the effects of viral diversity. Such characterizations extend also to predictions regarding diverse variants of viruses, better identification of evolutionary events such as host-switching and recombination/reassortment and methods to surveil viral agents affecting public health. This Special Issue aims to compile scientific reports on these efforts to disseminate best practices aimed to aid in the development of accessible diagnostics and treatments and the prevention of future infectious outbreaks.

## About the Journal

### Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Viruses* (ISSN 1999-4915). *Viruses* is published in open access format—research articles, reviews and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Viruses* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We would be pleased to welcome you as one of our authors.

---

### Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,  
National Cancer Institute, Frederick, MD 21702-1201, USA

### Author Benefits

#### High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

#### Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
