

Special Issue

Fruit Tree Viruses and Viroids

Message from the Guest Editors

Fruit trees constitute a very important part of agricultural economy worldwide. They are propagated vegetatively and they are also grafted on rootstocks. As a result, they are susceptible to many plant viruses with some of them causing severe diseases, crop losses and reducing the productive life of their fruit trees host plants. The movement of propagative material across the borders has facilitated the spread of fruit tree viruses and their insect vectors worldwide. The last few years the use of next generation sequencing (NGS) technology has increased the number of virus species detected and in some cases these viruses were identified as the causal agents of known diseases having previously unknown etiology. The NGS technology has also increased the number of virus sequences deposited in the data bases and this also helped to improve their molecular diagnostic tools and studies on their genetic diversity. In this Special Issue of *Viruses*, we would like to include both research and review papers, providing an insight into the latest research on Fruit Tree Viruses and Viroids and to highlight key outcomes.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Viruses* (ISSN 1999-4915). *Viruses* is published in open access format—research articles, reviews and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Viruses* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
