

Special Issue

State-of-the-Art HIV and HTLV Research in Latin America

Message from the Guest Editors

HTLV infection is frequently detected in some areas of the world. In Latin America, several countries have documented endemic areas. To date, there is no specific treatment for HTLV infection, and many aspects of the infection remain obscure. HIV infection is also endemic in Latin American countries, and despite increasing access to antiretroviral therapy, there are still many new infections and deaths caused by HIV every year. Coinfection by HIV and HTLV is also a frequent finding, and its consequences can be reciprocal. This Special Issue will focus on different aspects of HTLV and HIV infections in Latin America. Epidemiological data, interaction with other infectious diseases, prognostic biomarkers, therapeutic approaches, and aspects of immune response are points of interest. In addition, any relevant information on the results of such problems will be also welcome. We will encourage reports on all information potentially relevant to Latin American countries.

About the Journal

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
