Bovine Influenza

Message from the Guest Editors

In March 2024, an in-depth clinical investigation of causative agents associated with a mystery disease complex affecting dairy cows in the Texas panhandle region of United States led to the unexpected identification of a highly pathogenic avian influenza (HPAI) H5N1 virus in diseased dairy cows with a significant drop in milk production. The sudden emergence of the H5N1 virus in dairy cows provides convincing evidence that cattle are also a susceptible host to the influenza A virus. This new discovery also raises many important questions, such as how the bird influenza virus jumps to dairy cows with high levels of the virus detected in raw milk, and how to protect cattle herds as well as people who work for this important industry. This Special Issue will feature the most recent research and findings on influenza viruses in cattle, including epidemiology and public health, tropism, adaptation to bovines and cross-species transmission, infection biology, evolution, virus–host interactions, immune responses, and vaccine development. In addition, this SI also welcome topics on influenza viruses in other ruminating mammals, including goats, sheep, and deer.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Viruses* (ISSN 1999-4915). *Viruses* is published in open access format—research articles, reviews and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Viruses* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
