

Special Issue

Epigenetics and Viral Infection

Message from the Guest Editor

It is well known that to support infection, viruses co-opt cellular mechanisms that control transcription. Chromatin composition and chromatin structure are important regulators of gene expression. In the past years, the role of chromatin and chromatin-modifying enzymes has been explored in the context of virus-host interaction demonstrating the importance of viral infection on the host epigenome and the role of epigenetics in controlling viral replication. The goal of this Special Issue is to provide a collection of the most significant advances in the field of epigenetics and viral infection. We expect to receive manuscripts outlining how viruses and their host each attempt to use epigenetics to gain control of the other's transcription to achieve their own ends.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Viruses* (ISSN 1999-4915). *Viruses* is published in open access format—research articles, reviews and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Viruses* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.2 days after submission; acceptance to publication is undertaken in 2.7 days (median values for papers published in this journal in the second half of 2025).
