Special Issue

Flavivirus Replication and Pathogenesis

Message from the Guest Editor

Within the family Flaviviridae, the genus Flavivirus consists of more than 50 species; in any part of the globe where humans can live, at least one flavivirus species can be found. Pathogenic flaviviruses are primarily transmitted by blood-sucking mosquitoes or ticks. These species include a significant number of emerging and re-emerging arboviruses of global significance, such as Japanese encephalitis, West Nile, Zika, dengue, yellow fever, tick-borne encephalitis, Kyasanur Forest disease, and Omsk haemorrhagic fever viruses. Infections by these pathogens can cause a wide spectrum of severe neurological and non-neurological diseases in humans and/or animals. Although the structure of these viruses and their gene products are relatively well defined thus far, they still pose a significant threat to humans and/or animals, and in most cases, no specific medical interventions are available. We expect this publication opportunity will yield new insights that will contribute directly to the development of new control strategies to prevent or treat infections caused by these clinically important pathogens.

About the Journal

Message from the Editor-in-Chief

You are invited to contribute a research article or a comprehensive review for consideration and publication in *Viruses* (ISSN 1999-4915). *Viruses* is published in open access format—research articles, reviews and other content are released on the internet immediately after acceptance. The scientific community and the general public have unlimited free access to the content as soon as it is published. As an open access journal, *Viruses* is supported by the authors or their institutes by payment of article processing charges (APC) for accepted papers. We would be pleased to welcome you as one of our authors.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research, National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
