

Special Issue

The Impact and Applications of Phages in the Food Industry and Agriculture

Message from the Guest Editors

The food industry (and its component agri-food sector) is a multi-billion dollar global industry, reliant on the production of foods with desirable organoleptic and physical properties. Dairy fermentations are consistently challenged by the presence of bacteriophages (phages), which may infect the lactic acid bacterial starter or adjunct cultures. Such infections may lead to slow or even failed fermentations with significant economic consequences. In this Special Issue, we invite authors to submit unpublished original contributions and critical reviews covering topics relating to the research of phages that either negatively impact food fermentations or that may be beneficially applied to improve the microbial safety and/or quality of food or beverages. This may include themes such as phage ecology in food fermentations, phage-host interactions and the application of phages or their derived components as biocontrol or biosensors in the food industry.

About the Journal

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
