Viral Infections in Developing Countries

Message from the Guest Editors

Viral infections by endemic, emerging, and reemerging viruses are constantly challenging public health systems and health policies all over the world. Circulation on these viruses in developing countries press for the development of new cost-effective diagnostic methods, therapeutic and prevention strategies, and efficient epidemiological surveillance. Despite particular economic and public health adversities, developing countries have been braving those issues and making important contributions to virology research over the years. Looking for high-quality science developed in the face of unique challenges, we encourage researchers to submit articles to this Special Issue entitled “Viral Infection in Developing Countries.” This Special Issue’s goal is to publish research studies that address efforts for viral diagnosis, surveillance, prevention and treatment in developing countries. Investigations on pathogenesis and clinical aspects of virus infection are also welcome, as well as relevant epidemiological findings. Both original manuscripts and reviews are welcome.

About the Journal

Message from the Editor-in-Chief

Viruses (ISSN 1999-4915) is an open access journal which provides an advanced forum for studies of viruses. It publishes reviews, regular research papers, communications, conference reports and short notes. Our aim is to encourage scientists to publish their experimental and theoretical results in as much detail as possible. There is no restriction on the length of the papers. The full experimental details must be provided so that the results can be reproduced. We also encourage the publication of timely reviews and commentaries on topics of interest to the virology community and feature highlights from the virology literature in the 'News and Views' section.

Electronic files or software regarding the full details of the calculation and experimental procedure, if unable to be published in a normal way, can be deposited as supplementary material.

Editor-in-Chief

Dr. Eric O. Freed

HIV Dynamics and Replication Program, Center for Cancer Research,
National Cancer Institute, Frederick, MD 21702-1201, USA

Author Benefits

High Visibility:

indexed within Scopus, SCIE (Web of Science), PubMed, MEDLINE, PMC, Embase, PubAg, and other databases.

Journal Rank:

JCR - Q2 (Virology) / CiteScore - Q1 (Virology/Infectious Diseases)

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 18.6 days after submission; acceptance to publication is undertaken in 2.5 days (median values for papers published in this journal in the first half of 2025).
