New Horizons in Myopia Management: Bridging Epidemiology and Clinical Innovation

Message from the Guest Editors

Myopia can lead to irreversible visual impairment. Early detection and intervention of eye and visual disorders are particularly crucial in childhood, given the younger population's more rapid development. The primary aim of this Special Issue is to assemble a comprehensive collection of peer-reviewed articles that explore a wide array of topics related to myopia and other visual disorders. We invite original articles or reviews focused on, but not limited to, the following potential topics: prevalence studies of myopia or other visual disorders, risk and prevention factors, treatment and control methods, approaches for detecting and measuring the risk of developing myopia or other visual disorders, the influence of myopia on visual function and overall quality of life, and ocular pathologies in childhood. We are also keen to include articles that delve into advances in diagnostic technologies and imaging techniques, the role of artificial intelligence in myopia research, and innovations in treatment modalities, including pharmacological interventions and surgical procedures.

About the Journal

Message from the Editor-in-Chief

Vision research has developed tremendously over the last years and has been well served by some of the available journals. We feel that a new journal, with no historical or societal affiliations, offers a chance for a broad interdisciplinary coverage and a means of highlighting the increasing number of interesting results and ideas. We are therefore convinced that the launch of a truly interdisciplinary journal in the area of vision science is worthwhile, timely and necessary. *Vision* is a journal for, and by, all vision scientists, committed to the advancement of their field of interest.

Editor-in-Chief

Prof. Dr. Andrew Parker

Department of Physiology, Anatomy and Genetics, University of Oxford,

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed, PMC, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 22.7 days after submission; acceptance to publication is undertaken in 4.7 days (median values for papers published in this journal in the second half of 2025).
