Eye and Head Movements in Visuomotor Tasks

Message from the Guest Editor

Dear colleagues, The development of wearable tracking technologies has promoted studies on eye and head movements, given that individuals perform visuomotor tasks with unrestrained head movement. These studies have implications for performance in tasks such as driving and sports, and for clinical disorders of eye-head coordination. In this feature issue, we invite both original and review articles that examine the manner in which the eyes and head are coordinated in both normal and disease states when individuals are engaged in everyday activities and in naturalistic tasks, such as those in sports, driving, or piloting aircraft. This Special Issue aims to collate studies on eye-head coordination that utilize techniques including, but not limited to, eye and head tracking, neuroimaging, and virtual reality.

About the Journal

Message from the Editor-in-Chief

Vision research has developed tremendously over the last years and has been well served by some of the available journals. We feel that a new journal, with no historical or societal affiliations, offers a chance for a broad interdisciplinary coverage and a means of highlighting the increasing number of interesting results and ideas. We are therefore convinced that the launch of a truly interdisciplinary journal in the area of vision science is worthwhile, timely and necessary. *Vision* is a journal for, and by, all vision scientists, committed to the advancement of their field of interest.

Editor-in-Chief

Prof. Dr. Andrew Parker

Author Benefits

Open Access:

free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility:

indexed within ESCI (Web of Science), Scopus, PubMed, PMC, and other databases.

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 23.2 days after submission; acceptance to publication is undertaken in 3.7 days (median values for papers published in this journal in the first half of 2025).
