Water Quality Variability, Characterization, Risks and Pollution Sources' Control

Guest Editor:

Dr. Valentina-Mariana Manoiu

Department of Meteorology and
Hydrology, Faculty of Geography,
University of Bucharest,
Bulevardul Nicolae Balcescu 1,
010041 Bucharest, Romania

Deadline for manuscript
submissions:

closed (20 April 2024)

Message from the Guest Editor

Dear Colleagues,

The global climate changes are already perturbing our lives, including freshwater availability. The human race's activities, greed and recklessness have modified the quality of water resources, especially in the last 50 years, and the resultant pollution has affected most water bodies on the globe. It is necessary to carry out efficient water quality and pollution analysis and control, and to engage in risk management of low-quality water.

We welcome submissions that analyze water quality management under the impact of human actions; water quality handling under the reality of climate change; water quality variability and characterization in different regions/countries and under different impacts; the impacts of different pollution sources on water quality and water pollution control; water quality monitoring systems under the burden of different economic activities in different contexts; effective technologies and policies that can mitigate the water pollution and its consequences; as well as best practices developed and best lessons learnt (narratives are also welcome) on the impacts of pollution on water quality.

Special Issue

water

an Open Access Journal by MDPI

Editor-in-Chief

Dr. Jean-Luc PROBST

Laboratory of Functional Ecology
and Environment, Centre
National de la Recherche
Scientifique (CNRS), University of
Toulouse, Campus ENSAT,
Auzeville Tolosane, France

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (*Water Resources*) / CiteScore - Q1 (*Water Science and Technology*)
