Environmental Chemistry and
Engineering—ICTM, University of
Belgrade, Njegoševa 12, 11158
Belgrade, Serbia

Deadline for manuscript
submissions:

closed (10 July 2024)

Message from the Guest Editors

Dear Colleagues,

Access to drinking water is one of the largest problems of modern times, and water pollution is a growing problem worldwide. Sediment may act as a sink for a huge number of toxic substances and should therefore be investigated in addition to water, as it contains a record of the previous pollution. The chemical composition of sediment is informative, both in investigations of mineral resources of a particular region for mining purposes and in tracing contamination from different sources (sewage, industry, etc.).

Pollution affects all sources of drinking water—ground, spring, river, and lake. The interaction of water and sediment is of special importance, as sediment can also release heavy metals and act as a source of pollution. Application and development of existing and new analytical methods are also very important aspects.

The purpose of [this Special Issue](#), the third related to this theme, is to publish original, high-quality research papers, as well as review articles, addressing recent advances in water and aquatic sediment research, new methods and developments in monitoring, as well as legislative development.

Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

Author Benefits

Open Access: free for readers, with article processing charges (APC) paid by authors or their institutions.

High Visibility: indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

Journal Rank: JCR - Q2 (Water Resources) / CiteScore - Q1 (Aquatic Science)
