## Freshwater Resources and Ecology: Distribution of Hydrobiology and Invasive Species

Guest Editors:

**Prof. Dr. Daqing Chen**

Yangtze River Fisheries Research Institute, Chinese Academy of Fishery Sciences, Wuhan, China

**Dr. Weitong Xu**

Yangtze River Fisheries Research Institute, Chinese Academy of Fishery Sciences, Wuhan, China

Deadline for manuscript submissions:

**closed (31 August 2023)**

### Message from the Guest Editors

As a vital resource for human existence and ecological systems, fresh water is of fundamental importance to every form of life. Several disciplinary areas, including zoology, behavioral science, botany, resources, and other biological sciences such as physiology, genetics, and molecular biology, share an interest in freshwater ecology. This topic is also closely related to environmental sciences including biogeography, geomorphology, limnology. Freshwater resource availability has been under threat from climate change and other human pressures such as hydropower use, emerging contaminants and species invasion in recent decades. Biological invasions pose a threat to biodiversity, ecological services, conservation and resource management. Invasive species show devastating impacts on the native community and ecosystem processes. Many characteristics that may contribute to the establishment of non-native species can enhance our understanding of the ecology of species invasions.

## Editor-in-Chief

### **Dr. Jean-Luc PROBST**

Laboratory of Functional Ecology and Environment, Centre National de la Recherche Scientifique (CNRS), University of Toulouse, Campus ENSAT, Auzeville Tolosane, France

## Message from the Editor-in-Chief

In the context of global changes, the sustainable management of water cycles, going from global and regional water cycles to urban, industrial and agricultural water cycles, plays a very important role on the water resources and on their relationships with food, energy, biodiversity, ecosystem functioning and human health. *Water* invites authors to provide innovative original full articles, critical reviews and timely short communications and to propose special issues devoted to new technological and scientific domains and to interdisciplinary approaches of the water cycles. We ensure a critical review process and a quick turnaround between submission and final decision.

## Author Benefits

**Open Access:** free for readers, with article processing charges (APC) paid by authors or their institutions.

**High Visibility:** indexed within Scopus, SCIE (Web of Science), Ei Compendex, GEOBASE, GeoRef, PubAg, AGRIS, CAPlus / SciFinder, Inspec, and other databases.

**Journal Rank:** JCR - Q2 (*Water Resources*) / CiteScore - Q1 (Water Science and Technology)
